#### SEMINAR OUTLINE:

12:00-1:00 Dr. Nath: Description of original injury and orthopedic sequela  
Surgical Interventions: rationale, description, and outcome

1:00-2:00 Questions regarding pre-surgery and post-surgical rehabilitation

2:00-3:00 Assessment of children with injury: lecture, video

3:00-4:00 Treatment Planning: rationale, protocol, modalities, etc.

4:00-5:00 Video/Live Case presentations

#### LEARNING OBJECTIVES:

- Understand the nerve anatomy specific to the newborn brachial plexus and classification as to location and severity of injury
- Understand options for surgical interventions for infants & children
- Understand the neurological, orthopedic and developmental sequela of Obstetric Brachial Plexus Injury
- Be able to perform a thorough examination and evaluation of a patient with an Obstetrical Brachial Plexus Injury
- Assess and develop an on-going treatment plan to assist the child to achieve their fullest potential

**Parents are invited to attend a special morning individual consultation with Dr. Nath at no charge.**

If you or one of our families has a question or concern about a specific child with a brachial plexus injury, email the information to [ghighsmith@pedtherapy.com](mailto:ghighsmith@pedtherapy.com) and I will send those parents an information packet with instructions on reserving a free morning consultation prior to the course. If you as a therapist wish to attend the morning session with your patient, that is fine, note that on your email.
